for construction products

European Technical Assessment

ETA-16/0089
of 20 December 2024

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the European Technical Assessment:

Deutsches Institut für Bautechnik

Trade name of the construction product

Injection system EJOT Multifix Vinylester /
Sormat ITH Vinylester for
masonry

Product family
to which the construction product belongs

Metal Injection anchors for use in masonry

Manufacturer

EJOT SE & Co. KG
Market Unit Construction
In der Stockwiese 35
57334 Bad Laasphe
GERMANY

Manufacturing plant

EJOT Herstellwerk 24

This European Technical Assessment
contains

77 pages including 3 annexes which form an integral part
of this assessment

This European Technical Assessment is
issued in accordance with Regulation (EU)
No 305/2011, on the basis of

EAD 330076-01-0604

This version replaces

ETA-16/0089 issued on 24 November 2016

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The "Injection system EJOT Multifix Vinylester / Sormat ITH Vinylester for masonry" is a bonded anchor (injection type) consisting of a mortar cartridge with injection mortar EJOT Multifix USF / Sormat ITH-Ve or EJOT Multifix USF Winter / Sormat ITH-Wi, a perforated sleeve and an anchor rod with hexagon nut and washer or an Internal threaded rod. The steel elements are made of zinc coated steel, stainless steel or high corrosion resistant steel.

The anchor rod is placed into a drilled hole filled with injection mortar and is anchored via the bond between steel element, injection mortar and masonry and mechanical interlock.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the fastener is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the fastener of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic | Performance |
|---|-------------------------------------|
| Characteristic resistance for static and quasi-static loading | See Annexes B 5, B 6 C 1 to C 56 |
| Characteristic resistance and displacements for seismic loading | No performance assessed |

3.2 Safety in case of fire (BWR 2)

| Essential characteristic | Performance |
|---|---|
| Reaction to fire | Class A1 |
| Resistance to fire under tension and shear loading with and without lever arm. Minimum edge distances and spacing | See Annexes C2, C7, C8, C13, C14, C17, C18, C19, C20, C37, C38, C43, C44, C45, C46, C51 and C52 |

3.3 Hygiene, health and the environment (BWR 3)

| Essential characteristic | Performance |
|--|-------------------------|
| Content, emission and/or release of dangerous substances | No performance assessed |

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330076-01-0604 the applicable European legal act is: [97/177/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 20 December 2024 by Deutsches Institut für Bautechnik

Installation in solid brick with or without non-loadbearing layer

Threaded rod M8 up to M16 / Internal threaded rod IG-M6 up to IG-M10 without sleeve

Prepositioned installation

Push through installation

Threaded rod M8 up to M16 / Internal threaded rod IG-M6 up to IG-M10 with sleeve

Prepositioned installation

Push through installation

Installation in hollow brick with or without non-loadbearing layer

Threaded rod M8 up to M16 / Internal threaded rod IG-M6 up to IG-M10 with sleeve

Prepositioned installation

Push through installation

For push through installation the annular gap between rod and fixture must be filled with mortar

- h_{ef} = effective anchorage depth
- h_{nom} = overall anchor embedment depth
- h_0 = drill hole depth
- h = thickness of masonry member

- d_0 = nominal drill hole diameter
- d_f = diameter clearance hole
- t_{fix} = thickness of fixture
- t_{nll} = thickness of non-loadbearing layer

Injection system EJOT Multifix Vinylester / Sormat ITH Vinylester for masonry

masonry

Product description

Injection system

Annex A 3

Threaded rod M8 up to M16 with washer and hexagon nut

Commercial standard rod with:

- Materials, dimensions and mechanical properties acc. to Table A1
- Inspection certificate 3.1 acc. to EN 10204:2004. The document shall be stored
- Marking of embedment depth

Internal threaded rod IG-M6 to IG-M10

Threaded rod or screw

Producer marking: e.g.  M8

 Marking Internal thread (optional)

 Mark

M8 Thread size (Internal thread)

A4 additional mark for stainless steel

HCR additional mark for high-corrosion resistance steel

-8 additional mark for property class 8.8

Injection system EJOT Multifix Vinylester / Sormat ITH Vinylester for masonry

Table B6: Working and curing time - EJOT Multifix USF / Sormat ITH-Ve

| Temperature in base material | Maximum working time | Minimum curing time ¹⁾ |
|------------------------------|----------------------|-----------------------------------|
| T | t_{work} | t_{cure} |
| - 10 °C to - 6 °C | 90 min ²⁾ | 24 h |
| - 5 °C to - 1 °C | 90 min | 14 h |
| 0 °C to + 4 °C | 45 min | 7 h |
| + 5 °C to + 9 °C | 25 min | 2 h |
| + 10 °C to + 19 °C | 15 min | 80 min |
| + 20 °C to + 24 °C | 6 min | 45 min |
| + 25 °C to + 29 °C | 4 min | 25 min |
| + 30 °C to + 39 °C | 2 min | 20 min |
| + 40 °C | 1,5 min | 15 min |
| Cartridge temperature | +5°C to +40°C | |

1) The minimum curing time is only valid for dry base material. In wet base material the curing time must be doubled.

2) Cartridge temperature must be at minimum +15°C

Table B7: Working and curing time - EJOT Multifix USF Winter / Sormat ITH-Wi

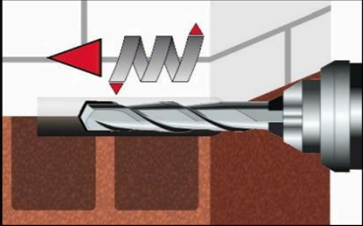

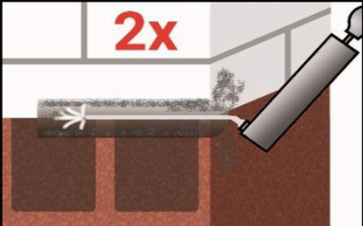

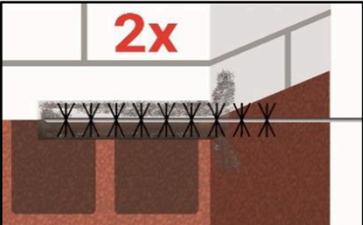

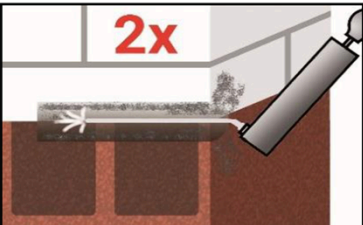

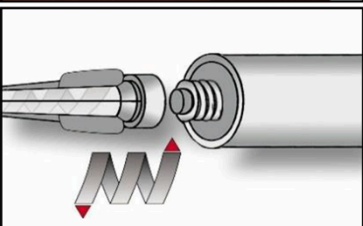

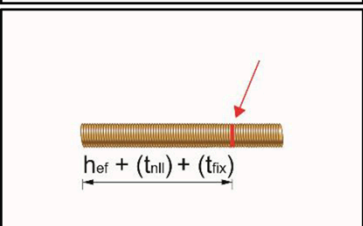

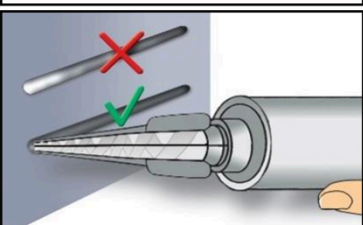

| Temperature in base material | Maximum working time | Minimum curing time ¹⁾ |
|------------------------------|----------------------|-----------------------------------|
| T | t_{work} | t_{cure} |
| - 20 °C to - 16 °C | 75 min | 24 h |
| - 15 °C to - 11 °C | 55 min | 16 h |
| - 10 °C to - 6 °C | 35 min | 10 h |
| - 5 °C to - 1 °C | 20 min | 5 h |
| 0 °C to + 4 °C | 10 min | 2,5 h |
| + 5 °C to + 9 °C | 6 min | 80 min |
| + 10 °C | 6 min | 60 min |
| Cartridge temperature | -20°C to +10°C | |

1) The minimum curing time is only valid for dry base material. In wet base material the curing time must be doubled.

Intended use
Working and curing time

Annex B 8

| Installation instructions | |
|---|---|
|  | <p>1. Drill a hole to the required embedment depth with drilling method according to Annex C 4 - C 56. Drill bit diameter according to Table B5.</p> |
|  | <p>2a. Blow the bore hole clean minimum 2x from the bottom or back by hand pump or compressed air tool (Annex B 7). For applications in solid masonry with a bore hole depth $h_0 > 100\text{mm}$ cleaning with compressed air is required.</p> |
|  | <p>2b. Attach brush RBT according to Table B5 to a drilling machine or a cordless screwdriver. Brush the bore hole minimum 2x with brush over the entire embedment depth in a twisting motion (if necessary, use a brush extension RBL).</p> |
|  | <p>2c. Finally blow the bore hole clean minimum 2x from the bottom or back by hand pump or compressed air tool (Annex B 7). For applications in solid masonry with a bore hole depth $h_0 > 100\text{mm}$ cleaning with compressed air is required.</p> |
|  | <p>3. Screw on static-mixing nozzle SM-14W / PM-19E, and load the cartridge into an appropriate dispensing tool. If necessary, cut off the foil tube clip before use. For every working interruption longer than the maximum working time t_{work} (Annex B 8) as well as for new cartridges, a new static-mixer shall be used.</p> |
|  | <p>4. Mark setting position on the anchor rod. Consider t_{nll} and/or t_{fix} in case of installation through non-loadbearing layers and/or push through installation. The anchor rod shall be free of dirt, grease, oil or other foreign material.</p> |
|  | <p>5. Not proper mixed mortar is not sufficient for fastening. Dispense and discard mortar until a uniform grey colour is shown (at least 3 full strokes; for foil tube cartridges at least 6 full strokes).</p> |

| | |
|--|------------------|
| Injection system EJOT Multifix Vinylester / Sormat ITH Vinylester for masonry | Annex B 9 |
| Intended use Installation instructions | |

Installation instructions (continuation)

Installation without sleeve

6. Starting at bottom of the hole and fill the hole up to approximately two-thirds with adhesive. (If necessary, a mixer nozzle extension VL shall be used.) Slowly withdraw of the static mixing nozzle avoid creating air pockets. Observe the temperature related working time t_{work} (Annex B 8).

7. Insert the anchor rod while turning slightly up to the embedment mark.

8. Annular gap between anchor rod and base material must be completely filled with mortar. For push through installation the annular gap between anchor rod and fixture must be filled with mortar. Otherwise, the installation must be repeated starting from step 6 before the maximum working time t_{work} has expired.

Installation with sleeve

6. Insert the perforated sleeve into the hole flush with the surface of the masonry. Never modify the sleeve in anchoring area (h_{ef}). For installation with sleeve SH 16x130/330 through a non-load-bearing layer and/or fixture the clamping area may be reduced to the thickness of the non-load-bearing layer and/or attachment.

7. Starting from the bottom or back fill the sleeve with mortar. (If necessary, a mixer nozzle extension VL shall be used.) Refer to the cartridge label or the technical data sheet for the exact amount of mortar. For push-through installation through the fixture the sleeve must also be completely filled with mortar up to the fixture. Observe the temperature related working time t_{work} (Annex B 8).

8. Insert the anchor rod with a slight twist up to the mark

Injection system EJOT Multifix Vinylester / Sormat ITH Vinylester for masonry

Intended use

Installation instructions (continuation)

Annex B 10

Installation instructions (continuation)

9. Temperature related curing time t_{cure} (Annex B 8) must be observed. Do not move or load the fastener during curing time.

10. Install the fixture by using a calibrated torque wrench. Observe maximum installation torque (Annex C 4 to C 56).

Injection system EJOT Multifix Vinylester / Sormat ITH Vinylester for masonry

| Performances Characteristic steel resistance under tension and shear load – under fire exposure | | | | | | | | | | |

Spacing and edge distances

- C_{cr} = Char. Edge distance
- C_{min} = Minimum Edge distance
- $S_{cr,II}$; ($S_{min,II}$) = Characteristic (minimum) spacing for anchors placed parallel to horizontal joint
- $S_{cr,I}$; ($S_{min,I}$) = Characteristic (minimum) spacing for anchors placed perpendicular to horizontal joint

| Anchor position | Load direction | | | |
|---|----------------|---|---|-------------------------------|
| | Tension load | Shear load parallel to free edge V_{II} | Shear load perpendicular to free edge V_{\perp} | |
| Anchors parallel to horizontal joint $S_{cr,II}$; ($S_{min,II}$) | | $\alpha_{g,II,N}$ | $\alpha_{g,II,V_{II}}$ | $\alpha_{g,II,V_{\perp}}$ |
| Anchors vertical to horizontal joint $S_{cr,I}$; ($S_{min,I}$) | | $\alpha_{g,I,N}$ | $\alpha_{g,I,V_{II}}$ | $\alpha_{g,I,V_{\perp}}$ |

- $\alpha_{edge,N}$ = Reduction factor for tension loads at the free edge for $C_{min} \leq c < C_{cr}$ (single anchor)
- $\alpha_{edge,V_{\perp}}$ = Reduction factor for shear loads perpendicular to the free edge for $C_{min} \leq c < C_{cr}$ (single anchor)
- $\alpha_{edge,V_{II}}$ = Reduction factor for shear loads parallel to the free edge for $C_{min} \leq c < C_{cr}$ (single anchor)
- $\alpha_{g,II,N}$ = Group factor for anchors parallel to horizontal joint under tension load
- $\alpha_{g,I,N}$ = Group factor for anchors perpendicular to horizontal joint under tension load
- $\alpha_{g,II,V_{II}}$ = Group factor for anchors parallel to horizontal joint under shear load parallel to the free edge
- $\alpha_{g,I,V_{II}}$ = Group factor for anchors perpendicular to horizontal joint under shear load parallel to the free edge
- $\alpha_{g,II,V_{\perp}}$ = Group factor for anchors parallel to horizontal joint under shear load perpendicular to the free edge
- $\alpha_{g,I,V_{\perp}}$ = Group factor for anchors perpendicular to hor. joint under shear load perpendicular to the free edge

Single anchor at the edge: $N_{RK,b,c} = \alpha_{edge,N} * N_{RK,b}$ resp. $N_{RK,p,c} = \alpha_{edge,N} * N_{RK,p}$
 $V_{RK,c,II} = \alpha_{edge,V_{II}} * V_{RK,b}$
 $V_{RK,c,\perp} = \alpha_{edge,V_{\perp}} * V_{RK,b}$

Group of 2 anchors: $N_{RK}^g = \alpha_{g,N} * N_{RK,b}$ resp. $V_{RK,\perp}^g = \alpha_{g,V_{\perp}} * V_{RK,b}$ (for $c \geq C_{cr}$)
 $V_{RK,II}^g = \alpha_{g,V_{II}} * V_{RK,b}$ resp. $V_{RK,c,\perp}^g = \alpha_{g,V_{\perp}} * V_{RK,b}$ (for $c \geq C_{min}$)
 $V_{RK,c,II}^g = \alpha_{g,V_{II}} * V_{RK,b}$

Group of 4 anchors: $N_{RK}^g = \alpha_{g,II,N} * \alpha_{g,I,N} * N_{RK,b}$ resp. $V_{RK,\perp}^g = \alpha_{g,II,V_{\perp}} * \alpha_{g,I,V_{\perp}} * V_{RK,b}$ (for $c \geq C_{cr}$)
 $V_{RK,II}^g = \alpha_{g,II,V_{II}} * \alpha_{g,I,V_{II}} * V_{RK,b}$ resp. $V_{RK,c,\perp}^g = \alpha_{g,II,V_{\perp}} * \alpha_{g,I,V_{\perp}} * V_{RK,b}$ (for $c \geq C_{min}$)
 $V_{RK,c,II}^g = \alpha_{g,II,V_{II}} * \alpha_{g,I,V_{II}} * V_{RK,b}$

Equations depend on anchor position and load direction (see table above). Reduction factor, group factor and resistances see annex C 4 – C 56. Reduction for installation in joints see annex B 1.

Brick type: Solid light weight concrete brick

Table C192: Characteristic values of tension and shear load resistances

| Anchor size | Perforated sleeve | Effective Anchorage depth | Characteristic Resistances with $c \geq c_{cr}$ and $s \geq s_{cr}$ | | | | | | |
|---|-------------------|---------------------------|---|-----------|------------|----------------------------|-----------|------------|------------------------|
| | | | Use condition | | | | | | |
| | | | d/d | | | w/d w/w | | | d/d w/d w/w |
| | | | 40°C/24°C | 80°C/50°C | 120°C/72°C | 40°C/24°C | 80°C/50°C | 120°C/72°C | All temperature ranges |
| | | | $N_{Rk,b} = N_{Rk,p}^{2)}$ | | | $N_{Rk,b} = N_{Rk,p}^{2)}$ | | | $V_{Rk,b}^{2)}$ |
| [mm] | | [kN] | | | | | | | |
| Normalised mean compressive strength $f_b \geq 2 \text{ N/mm}^2$ 1) | | | | | | | | | |
| M8 | - | 80 | 3,0 | 2,5 | 2,0 | 2,5 | 2,0 | 1,5 | 3,0 |
| M10 / IG-M6 | - | 90 | | | | | | | |
| M12 / M16 / IG-M8 / IG-M10 | - | 100 | | | | | | | |
| M8 | SH 12 | 80 | 2,5 | 2,5 | 2,0 | 2,5 | 2,0 | 1,5 | |
| M8 / M10 / IG-M6 | SH 16 | ≥ 85 | | | | | | | |
| M12 / M16 / IG-M8 / IG-M10 | SH 20 | ≥ 85 | | | | | | | |

1) For lower compressive strengths resistances must be multiplied by the conversion factor according to Table C187. For stones with higher strengths, the shown values are valid without conversion.

2) $N_{Rk,b,c} = N_{Rk,p,c}$ and $V_{Rk,c,II} = V_{Rk,c,I}$ according to Annex C 3

Table C193: Displacements

| Anchor size | h_{ef} | $\delta N / N$ | δN_0 | δN_{∞} | $\delta V / V$ | δV_0 | δV_{∞} |
|------------------------|----------|----------------|----------------------|---------------------|----------------|----------------------|---------------------|
| | [mm] | [mm/kN] | [mm] | [mm] | [mm/kN] | [mm] | [mm] |
| M8 – M12 / IG-M6 – M10 | all | 0,1 | 0,1 * $N_{Rk} / 3,5$ | 2 * δN_0 | 0,3 | 0,3 * $V_{Rk} / 3,5$ | 1,5 * δV_0 |
| M16 | all | | | | 0,1 | 0,1 * $V_{Rk} / 3,5$ | 1,5 * δV_0 |
